1Profile

Final-year B.Tech (AI/ML & Data Science) student with strong foundations in data analytics, statistical modelling, and business intelligence. Key contributor to **SteamVision** — a 66,427-record end-to-end Steam games analytics study producing market-segmentation insights, a Commercial Success Index, statistical validation, and an interactive Tableau dashboard. Skilled at converting messy raw data into structured, decision-ready outputs for non-technical stakeholders.

1Data & Analytics Skills

Languages & Querying	Python, SQL
Data Wrangling	Pandas, NumPy, Regex, CSV/Excel pipelines
Statistical Analysis	Correlation, Regression (OLS, log-log), Hypothesis Testing (t-test), Distribution Analysis
Visualisation	Tableau, Matplotlib, Seaborn, Plotly
Reporting & Storytelling	LaTeX Reports, PowerPoint, Jupyter Notebooks, Markdown
Tools & Platforms	Git, GitHub, Jupyter Lab, VS Code, Kaggle, Steam APIs

1Capstone DVA Project

SteamVision — Steam Games Success Analytics

Jan 2026 – Apr 2026

Group Project · DVA Course · B.Tech (Team E_G10) · GitHub Repository | Tableau Dashboard

Business Problem:
The gaming industry releases thousands of titles annually, yet most fail to gain meaningful traction. The project answers: *"What factors drive the commercial success of a Steam game, and how can a developer or publisher predict market outcome before heavy launch investment?"*

Dataset: 66,427 Steam games (2006–2023), 20 features including rating, total reviews, all-time peak players, genre, and review percentage.

My Contributions:

- Produced the final **project presentation (PPT)** translating all analytical findings into a clear narrative for faculty evaluators and business stakeholders.
- Supported team-level understanding of the **KPI framework** and market-outcome classification (Hit / Average / Niche-Fail).
- Reviewed and validated the **Commercial Success Index (CSI)** formula and segmentation logic used across the project:

$$\text{CSI} = \left(0.4 \times \hat{p}_{\text{peak}} + 0.6 \times \hat{p}_{\text{reviews}}\right) \times 100$$

- Helped document the **business recommendations** and impact-estimation section of the final report.

Key Project Findings (team-wide):

- **Review traction** dominates success prediction: $r(\text{reviews}, \text{peak}) = 0.670$ vs $r(\text{rating}, \text{peak}) = 0.042$.
- Log-log regression: review count explains **74.3%** of peak player variation ($R^2 = 0.743$, $F = 1.92 \times 10^5$, $p < 0.001$).
- RPG significantly outperforms Casual genre in median peak players ($p = 0.0002739$, Welch's t-test).
- **60.04%** of all Steam games fall into the Niche/Fail band — making data-driven pre-launch screening highly valuable.
- Free-to-Play, Strategy, and RPG provide the strongest success floor by median all-time peak players.

Dashboard Design (4 screens):

- **Executive Overview** — platform KPIs, yearly release trends, peak & rating timelines.

- **Player Engagement & Retention** — top games, genre comparison, retention histogram, Sustained vs Hype scatterplot.
- **Player Satisfaction** — developer ranking, genre-vs-rating, review-impact plot.
- **Strategy & Opportunity** — portfolio matrix (Elite / Hidden Gems / Risk / Mid-Tier), lifecycle distribution, genre opportunity ranking.

1Education

B.Tech — Computer Science & Engineering (AI/ML) **Final Year**

2022 – 2026

Rajasthan Technical University · Ajmer, Rajasthan

Relevant Coursework: Data Visualisation & Analytics, Machine Learning, Statistics for Data Science, Database Management Systems, Probability & Statistical Inference.

1Additional Analytics Exposure

- **HaveCrops Analytics Dashboard** — Contributed to a crop-advisory analytics system with Plotly interactive charts, risk-index visualisation, and dark-themed premium UI.
- **Personal Finance Analytics (FinSet)** — Built and deployed an expense-tracking application with visual analytics dashboards, providing hands-on exposure to user-facing data storytelling.
- Proficient in writing LaTeX technical reports (see `steam_games_analytics_report.tex` in the SteamVision repo).
